

IMSS
Office of Logistics, through the services of a contractor, undertook an Office-wide study on potential Bar Code applications. The study stimulated discussions in various offices on specific applications and OL has several Bar Code applications under development.

A property accountability system developed in the field for a CRAFT system, resulted in the use of OL resources to produce a somewhat more complex accountable property system for the Wang Alliance. The Alliance version has Audit Staff concurrence and is waiting formal approval.

In response to an Office of Communications requirement, OL has completed work on a Field Computer System. This system will be used OC AREA Headquarters personnel for inventory control. FCS uses a Micro-Vax II micro computer, has three user terminals and a laser printer. Deployment of the first system will be to AMCA Headquarters in mid November.

Commercial Logistics Application System (CLAS)

- In FY 87 the decision was made to change vendors ~~in~~ of "off-the-shelf" packages, for the CLAS project, from Management Science America (MSA) to Cullinet. The decision was based on more functionality of Cullinet's product and compatibility with OIT's data base management system, DMS/R, a Cullinet product.
- Unification of OL, OF and OIT efforts to provide an integrated Agency system to replace the Inventory Control System, Contract Information System, General Accounting System, Financial Reporting System, and to provide real-time "funds control."
- Established an Initial Operating Capability (IOC) target of 1 October 1988.

ADP Task Force

- An OL ADP Task Force was established to provide uniform guidance for data processing,

hardware and software acquisitions and bar-code
technology within OLC. To also define standards
for hardware in the Personal Computer and bar-code
applications in OLC.
